NEONATAL LIFE SUPPORT
KEY MESSAGES

GUIDELINES 2025
EUROPEAN RESUSCITATION COUNCIL©

Delay cord clamping for at least 60 seconds

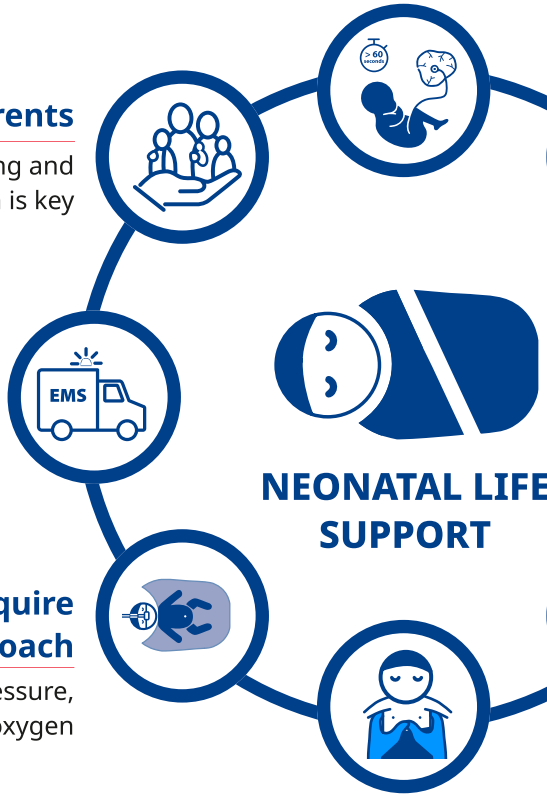

Longer may be beneficial
No cord milking < 28 weeks

Involve parents

Communication before, surrounding and after birth is key

Dry, wrap, stimulate & keep warm

Most infants do not need advanced help at birth

Unexpected out of hospital births require an altered approach

Extra attention to prevention of hypoxaemia and hypothermia

Assess breathing & heart rate

This will guide the next steps

Infants < 32 weeks require an altered approach

Plastic bag, CPAP, lower inflation pressure, higher oxygen

Open the airway & inflate the lungs

These are fundamental steps in supporting transition and newborn resuscitation

Chest compressions and drugs are rarely needed

Umbilical vein is preferred vascular access

CPAP - continuous positive airway pressure
